# WILLIAM GLICKMAN

**FULL-STACK & AGENTIC AI ENGINEER**

willglickman@gmail.com | 516-639-9257 | wglickman.com | linkedin.com/in/william-glickman | github.com/wglickman33

## PROFILE

Full-stack software engineer and agentic AI engineer specializing in LLM-powered conversational systems, with a neuroscience research background applied directly to healthcare AI. Built and evaluated production AI voice and chat agents for behavioral health admissions at Further Technologies, including an automated regression-testing framework in Langfuse, and independently architect and operate a full-stack e-commerce platform at My Kosher Delivery. Ships secure, scalable systems end-to-end, test-first.

## TECHNICAL SKILLS

**Languages:** JavaScript, TypeScript, Python, SQL

**Frontend:** React.js, Vite, HTML5, CSS/SCSS, Tailwind CSS, Material UI (MUI), Recharts, Responsive Web Design

**Backend:** Node.js, Express.js, Flask, REST & Custom APIs, JWT Authentication, RBAC, Webhooks, Google Maps API, Zod, Bcryptis, Jose

**Data & Cloud:** PostgreSQL, MySQL, MongoDB, Redis, Firebase, Supabase, Sequelize ORM, Celery, Heroku, Netlify, CI/CD, Cloudinary

**AI Engineering:** Agentic AI, Generative AI, Prompt Engineering, OpenAI / Anthropic / Google Gemini APIs, Langfuse, RetellAI, Cekura, ElevenLabs

**Testing & Tools:** Test-Driven Development, Jest, Pytest, Vitest, Playwright, PyAutoGUI, Postman, Bruno, Git, GitFlow, Agile/Scrum, Datadog, Sentry, Metabase, ServiceNow, Ansible, Figma, Chromium, Jsdom, Oxlint, Esbuild, Netlify-CLI, React RTL

## EXPERIENCE

**Agentic AI Software Engineer | Further Technologies** Jun 2025 – Jul 2026

*New York, NY (Remote)*

- Engineered an LLM evaluation framework from scratch in Langfuse, running 4,000+ test cases across 11 datasets that replay recorded multi-turn conversations through the production agent setup, automatically routing each suite to the right agent stack, prompt, and facility type.
- Scored every reply two ways: checking the agent called the right tool with the right parameters (mocked scheduling, transfer, and escalation responses keep runs repeatable), and LLM-as-judge grading against a per-test checklist with a fixed seed. Tests use de-identified conversations.
- Automated failure reporting: each run outputs a PDF of failed cases with reasons, expected vs. actual output, and links to the test case and the full step-by-step trace; scores are tracked in Langfuse over time.
- Joined as sole engineer on the Behavioral Health team (grew to 4 engineers plus a manager); redesigned a static prompt into a dynamic architecture powering 4 facility-typed AI voice and chat admissions agents with crisis escalation, live transfer, and scheduling. Built agent tools from scratch alongside RetellAI's built-in tools (end call, transfer call), and a separate AI caller-simulation product for staff training.

**Full-Stack Software Engineer | My Kosher Delivery** Feb 2025 – Present

*New York, NY (Remote)*

- Co-founded and lead all engineering for a full-stack e-commerce platform serving 1,100+ users across the Five Towns, NYC, NJ, and the Hamptons, partnering with 11 restaurants and a B2B nursing-home vertical.
- Architected the full stack (React/Vite, Node.js/Express, PostgreSQL/Sequelize) on Netlify and Heroku; built JWT authentication with RBAC across 4 user types and Stripe payments with server-side order validation.
- Designed a multi-vendor cart and checkout with zone-based delivery logic and an admin analytics dashboard; integrated Shipday, Mailchimp, and Cloudinary, with real-time order updates via Server-Sent Events.
- Engineered an audit log covering the entire admin platform (usage, analytics, and anything that goes wrong) and 750+ automated tests across every part of the platform, developed test-first.

**Full-Stack Developer | BG Workspace Solutions** Aug 2023 – Present

*New York, NY (Remote)*

- Sole engineer for a React/JavaScript/SCSS web application connecting businesses with 8 premium furniture manufacturers, serving thousands of prospective clients over 2.5 years; own feature development, UI, and client-facing functionality.

**Junior AI Engineer | Quant Inc** Nov 2024 – May 2025

*New York, NY (Onsite)*

- Built an IT monitoring platform that watches computer systems and uses agentic AI (GPT-4, Flask, Redis, OpenSearch, ServiceNow, Ansible) to diagnose issues in real time and self-heal infrastructure, cutting incident resolution time by over 70% and boosting remediation efficiency 4.8x.

**Lead Instructor, Flight Trainer, and Curriculum Management | Aviato Drone & Code** Jul 2023 – Jun 2025

- Authored 7 JavaScript-based drone control curricula and led hiring, training, and performance management for a 15-person team, expanding the customer base by 300%.

## EDUCATION

**BrainStation | Diploma, Software Engineering; Certificate, User Interface Design** Jul 2024 – Feb 2025

**Binghamton University | B.S., Integrative Neuroscience** Aug 2020 – Aug 2023
